

Workshop Instructor:
Ileana Vassiliou
President, Creating Effective Organizations

Ileana Vassiliou, MBA, is President of **Creating Effective Organizations** -- a consulting firm she founded 15 years ago dedicated to amplifying the capability of organizations to perform. She has achieved measurable results in many organizations in both the public and private sector. The private sector includes manufacturing, high tech, gaming, hospitality, pharmaceuticals, and health care. In the public sector she has worked with the State of Nevada, the Nevada Supreme Court, various California utilities and the Province of Alberta. She held progressive leadership positions in Fortune 100 manufacturing where she ultimately had 17 sites reporting into her with their OPEX implementations in North and South America.

Clients say they most benefit from her work because she is also a certified leadership coach, so she helps leaders effectively lead the vital human side of change involved in various Lean implementations.

Whether delivering Root Cause Problem Solving techniques in workshops or in custom programs onsite at client's, her mission is to guide organizations through a shift from "status quo" to "status great". With her guidance, teams align into an army of problem solvers fueled by a renewed sense of passion and purpose. The result: increased operational efficiencies and improved customer experiences.

She believes in building strong solution-oriented cultures by up leveling the roles of team members throughout the workforce. Leaders become problem posers and their teams become problem solvers. The environment evolves from a fire-fighting reactive one into a much more proactive and strategic one.

Join us for this four-hour practical hands-on workshop, February 25, 8AM-12PM, where participants learn by helping to solve several of each other's real business issues. Root cause problem solving templates are provided as a guide for facilitating a team - for use in this workshop and for future use in your workplace.
